A guide for monitoring district implementation of educator evaluation systems

Trudy Cherasaro David Yanoski Marzano Research

Lyn Swackhamer RMC Research Corp.

This guide provides a three-step process and sample tools for state departments of education to monitor district implementation of state- or district-developed educator evaluation systems. Districts can also use the tools to self-monitor implementation and guide further development of their systems. For each step of the process, the guide provides sample tools developed by Regional Educational Laboratory Central and the Missouri Department of Elementary and Secondary Education. The steps guide states in collecting and analyzing policy and practice data on educator evaluation systems and in examining adherence to guidelines for quality educator evaluation systems.

Why this guide?

Most states are implementing new educator evaluation systems as part of their flexibility requests under the Elementary and Secondary Education Act. While some waiver states (10) require all districts to use a single, statewide educator evaluation system, most waiver states (36) leave some discretion to the school districts to design their own systems (Center on Great Teachers & Leaders, 2013). Principle 3 of the flexibility request requires states to ensure that local education agencies implement teacher and principal evaluation systems (U.S. Department of Education, 2012). The monitoring required is intended to go beyond asking districts to confirm compliance with state guidelines. Instead, it is designed to focus on understanding how districts are implementing the systems so that states can provide support as needed (Pennington, 2014).

States are developing a wide range of methods to monitor district educator evaluation systems, including creating new departments within state departments of education, encouraging peer review of teacher

evaluation proposals between districts, and implementing electronic data systems for approving and monitoring the systems (Pennington, 2014).

This guide walks users through a three-step process that states can use to monitor district implementation of educator evaluation systems to comply with the requirements of the Elementary and Secondary Education Act flexibility requests. It also offers example tools developed together with the Missouri Department of Elementary and Secondary Education that states can adapt to provide districts with greater clarity on state expectations about educator evaluation systems. Districts could also use state-developed tools to self-monitor their evaluation systems or gather formative data about implementation to adjust their processes. Additionally, districts could adopt or adapt survey tools to gather feedback from their educators about implementation of their evaluation systems.

The three steps in the state monitoring process are:

- 1. Develop state guidelines for educator evaluation systems.
- 2. Develop data-collection methods.
- 3. Determine adherence criteria and review data against the criteria.

Step 1. Develop state guidelines for educator evaluation systems

Description. Many states have developed guidelines for educator evaluation systems as part of their flexibility requests under the Elementary and Secondary Education Act. As the guidelines are put into practice, states should review them to identify areas for refinement. For example, states may look for redundant or overlapping guidelines or imprecise language that could lead to multiple interpretations. States should seek feedback from trainers or district leaders about the clarity of the guidelines and about how different terms are interpreted. As states develop data-collection instruments and criteria related to each of their guidelines, they can continue to identify changes needed to improve clarity.

Example from Missouri's Essential Principles of Effective Evaluation Systems. During the development of Missouri's flexibility request, the state developed the Essential Principles of Effective Evaluation Systems, which includes 7 principles and 35 indicators of an effective educator evaluation system (table 1).

To review these principles and indicators, Regional Educational Laboratory (REL) Central invited a team of about 10 trainers and Missouri Department of Elementary and Secondary Education leaders to identify and clarify imprecise terms for each principle. Missouri has a pool of trainers in each region to provide training and help districts implement new educator evaluation systems aligned to the state principles. The trainers selected for this meeting represented various regions of the state as well as various roles, such as superintendents, principals, and university faculty. Before the meeting, REL Central and Missouri education leaders identified 21 terms that needed clarification.

During a six-hour meeting, REL Central guided a conversation with the trainers and Missouri education leaders to answer two questions:

- What does this term mean in Missouri?
- What is the observable evidence related to this term?

The answers were used to develop a working definition of the terms that guided the remainder of the process for developing a monitoring system. Examples of two clarified definitions are shown in table 2.

Table 1. Missouri's Essential Principles of Effective Evaluation Systems

Table 2. How general evaluation terms were adapted for use in Missouri

Term	What does this term mean in Missouri?	What is the observable evidence related to this term?	Working definition
Research based	Aligned to the Missouri teacher and leader standards	District crosswalks ^a or alignment studies	The district evaluation system is aligned with the Missouri teacher and leader standards as evidenced by crosswalks and alignment studies
Multiple measures	Two or more means of determining student growth	Evaluation summative ratings based on two or more means of determining student growth	The district process includes student growth in the evaluation rating that is based on two or more sources for determining student performance

a. A crosswalk is a report or table that documents the alignment between sets of standards. It identifies areas where the standards overlap as well as areas where there are gaps in the alignment.

Source: Authors' summary based on conversations with Missouri education leaders in 2014; see text for details.

After the meeting, REL Central compiled a list of working definitions for each term and collected feedback from meeting attendees, additional trainers, and Missouri education officials.

Missouri is considering changes to the Essential Principles of Effective Evaluation Systems based on these conversations and other clarifications that emerged during development of a system for monitoring implementation. These changes will include additional examples to clarify terms and changes to language.

Step 2. Develop data-collection methods

A state's guidelines for educator evaluation systems should address district policies and practices. To determine whether guidelines are being met, it is thus necessary to collect both policy and practice data.

Policy data

Description. Policy data include policy documents or other district documents that describe the district's educator evaluation system. These data can be collected at the district level and examined for adherence to state guidelines.

To determine the types of policy data to collect, a state could convene a meeting with district leaders and trainers or other state staff who work closely with district leaders and ask participants to identify the policy documents related to each of the state's guidelines. The state can then create a list of documents aligned to each guideline. This checklist can be used to collect policy documents from each district by asking districts to identify which documents they have and to provide links to electronic documents or upload the documents to a state website or a secure data-sharing site such as Dropbox.

Example from Missouri's policy data collection checklist. REL Central convened five trainers and Missouri education leaders to develop a checklist to collect policy data from districts. During a two-hour conversation, the team was asked to brainstorm all possible documents that districts might have that describe district policy or guidelines related to each of the indicators in the seven principles in the state's Essential Principles of Effective Evaluation Systems.

The resulting list of documents constitutes the policy evidence related to each of Missouri's principles of effective evaluation systems. The checklist gives district personnel a starting point for gathering district

documents related to each principle. In addition, district personnel were asked to indicate how they will provide the documents to the state—on a website, through a secure data-sharing site such as Dropbox, in hard copy only—or whether they do not currently have these documents or they do not exist.

To pilot the checklist, Missouri asked three districts to use the checklist to submit policy documents. The checklist will continue to be modified as districts submit documents. An excerpt from a REL Central and Missouri policy data collection checklist form is shown in figure 1; the full checklist is in appendix A and available on REL Central's website (http://www.relcentral.org).

Practice data

Description. Practice data can be defined as information about how district policies are being put into practice. These data help the state and district understand whether the district evaluation system is being implemented as intended. Practice data can be collected through surveys that ask stakeholders questions about their experiences with the system.

Source: Authors' creation based on conversations with Missouri education leaders in 2014; see text for details.

To determine what practice data to collect, a state can convene a meeting with a sample of district education leaders or trainers and ask the group to identify survey questions for each of the state's guidelines that would help determine whether policies are being put into practice. This meeting could be combined with the meeting on policy documents, with the same group asked to identify both relevant policy documents and survey questions. As part of this process, the group should identify who (for example, teachers, principals, or district administrators) needs to answer each question. A suggested template to brainstorm potential survey questions, with examples from Missouri's principles and indicators, is shown in table 3. In this template the group lists each of the indicators from state guidelines and, for each indicator, lists the survey data related to the indicator that it would like to collect.

Once the survey questions and potential respondents are determined, the state can create separate online surveys for each group of respondents (such as teachers and principals) using online survey software such as SurveyMonkey. If possible, to gather feedback on the clarity of the questions, a state should conduct a small field test of the surveys. During this field test, the state would ask a small sample from each group to take the survey and then follow up by asking the survey respondents: Are the questions clear and unambiguous? Do the questions use language that is relevant and appropriate for the specific audience? The sample should represent multiple perspectives, including teachers from different content areas and grade levels, principals across various school levels, and district administrators from various regions and types of districts. Responses can be used to adjust the survey questions.

A state can then send out the survey invitations directly or provide districts with the survey links so that districts can invite staff to take the surveys.

Example from Missouri's surveys. REL Central led a team of five Missouri trainers and education leaders through the process described above to develop surveys to collect feedback from four groups of educators. Each survey included questions related to each principle and its indicators. Before the meeting, REL

Table 3. Template for identifying survey questions for collecting practice data, with examples from Missouri

Indicator	Potential survey data
Example: Includes clear statements of performance at each level.	Example: Teachers and principals indicate that teacher rubrics/scoring guides provide a clear path for improving practice. Principals indicate that principal rubrics provide a clear path for improving instruction. Teachers indicate that the teacher rubrics and scoring guides clearly describe what they need to know and do to earn each rating score.
Example: Includes required mentoring as a component of a comprehensive induction process.	Example: Teachers indicate that they have a school- or district-assigned mentor. Teachers indicate that they met with their mentors three or more times during the school year. Mentors indicate that they met with their mentees three or more times during the school year.

Source: Authors' creation based on conversations with Missouri education leaders in 2014; see text for details.

Central compiled example survey questions using published surveys on educator evaluation systems. During the four-hour meeting, the team identified the "big idea" behind each indicator, asking: What would educators report is happening if these indicators were in place? Then, the team reviewed and adopted or adapted example survey questions to match the big ideas. When necessary, new survey questions were written. After the meeting, REL Central compiled survey questions and shared draft surveys with the meeting participants and with additional trainers and Missouri education leaders for feedback and revisions. Additionally, a survey research expert reviewed the surveys. Revisions were made based on feedback. These are the four surveys that were developed, with a description of the topics covered in each survey:

- Teacher survey. Asks questions about the usefulness and clarity of the system, student growth, evaluator feedback, and mentoring experiences.
- Principal survey. Asks questions about the usefulness and clarity of the teacher and principal evaluation systems, student growth in both systems, evaluator feedback they received, feedback they provided, training on the teacher evaluation system, and implementation of the mentoring program.
- District administrator survey. Asks questions about the usefulness and clarity of the teacher and
 principal evaluation systems, student growth in both systems, feedback they provided, and training
 on the teacher evaluation system.
- *Mentor survey.* Asks questions about the support mentors provided to mentees.

The surveys are shown in appendixes B, C, D, and E and are available in Word format on REL Central's website (http://www.relcentral.org).

Step 3. Determine adherence criteria and review data against the criteria

Description. Once a state has developed guidelines and determined the needed policy and practice data related to those guidelines, it can develop adherence criteria to determine whether a district is meeting the state guidelines. For policy documents, the criteria should describe what policy documents the state would expect to see in a district to demonstrate that a guideline is being met. For practice data, the criteria should describe the percentage of respondents the state would expect to agree with survey questions related to each of the guidelines.

To develop the criteria, state leaders can use information gathered during step 1 when clarifying imprecise terms. For example, the observable evidence presented in table 1 for the term "research based" could easily translate into the following criterion: "The district has a crosswalk or alignment study that shows alignment between district standards and national or state teacher and leader standards."

State leaders need to determine whether responses should be expected from a majority of respondents or whether another threshold is more appropriate. When setting thresholds, state leaders should keep in mind any legislation or legal requirements that should be reflected in the criteria.

The state also needs to determine who will review the data against the criteria and which districts will be involved in the review each year. Although it would help to understand how every district is implementing educator evaluation systems, this may be an unreasonable expectation given the amount of time it would take to gather and review this much data. The state may opt to collect and review data from a sample of districts each year, with plans to collect data from all districts over the course of the next few years. As a starting point, the state could target districts that have been recognized as needing improvement based on the state's accountability system so it can provide additional support to these districts.

Example from Missouri's rating guide. REL Central led two Missouri education leaders through a process to develop adherence criteria to determine whether a district is meeting the state guidelines. The adherence

criteria were documented in a rating guide that lists criteria for policy documents and practice data for each principle and provides an overall scoring process for determining the extent to which each principle is met. As a first step in creating a rating guide, REL Central developed a document that linked the working definitions of evaluation terms, appropriate policy documents, and survey questions relevant to each indicator. Using this document, REL Central guided a six-hour conversation with Missouri education leaders to refine the list of policy and practice evidence needed for each principle. This refined list was used to develop criteria for each principle and to set thresholds for determining whether the criteria were met. Policy criteria describe which types of documents a district must have in place. Practice criteria describe which survey questions show evidence of implementation. Missouri decided to set thresholds that required a majority of both policy and practice data to fully meet the principle. A draft rating guide was developed based on this process.

A district leader reviewed the draft rating guide and provided feedback on clarity of the criteria, threshold levels, and feasibility of the process. REL Central and Missouri education leaders also tested the draft rating guide using data collected from the pilot of the policy data collection checklist and sample survey data. To test the rating guide, a team of four raters independently reviewed and rated two districts' data and then discussed the results when ratings did not match to make refinements and reach consensus. Testing the rating guide took a full day. On the same day, the team also developed a sample summary report format to summarize the ratings for each district and identify action steps for criteria that were not met.

A snapshot of the Missouri rating guide is shown in figure 2. The full rating guide is in appendix F. The sample summary district report is shown in appendix G. Missouri plans to collect and review data from districts in need of improvement to inform their district accreditation process. It also plans to review data from a sample of districts each year until all districts are eventually reviewed.

The process is iterative

Although this process for developing a state implementation monitoring system has been presented in linear steps, it is actually an iterative process in which each step informs the process as a whole. As each step is completed, a state may choose to realign all the documents and tools. For example, Missouri revised the surveys while developing the rating guide because it became clear that some of the survey questions were not tightly aligned with the criteria and others were redundant. Missouri is continuing to refine its process as additional data are collected.

In the initial conversations to clarify imprecise terms in the evaluation principles and indicators, Missouri began to look more deeply at its expectations and the language used to describe them. Missouri education leaders realized that it would have been beneficial to have completed this process sooner, so that there would have been a greater degree of clarity about expectations before implementation began. However, at each phase in the process Missouri developed a deeper understanding of its expectations, resulting in information that districts can use as they implement their new evaluation system.

Appendix A. Policy data collection checklist

Regional Educational Laboratory Central worked with Missouri trainers and education leaders to develop a checklist to collect policy data from districts. The checklist includes possible documents that districts might have that describe district policy or guidelines related to each of the indicators in the seven principles in the state's Essential Principles of Effective Evaluation Systems. The checklist gives district personnel a starting point for gathering district documents related to each principle.

	Principle 1: Performance of educators is measured against research based, proven expectations and performance targets consistent with the improvement of student achievement

Appendix B. Teacher survey on district implementation of educator evaluation systems

Teacher evaluation system

1. Please rate your level of agreement with the following statements about your district's teacher evaluation system.

	Strongly Neither disagree			Strongly	
	disagree	Disagree	nor agree	Agree	agree
The teacher evaluation rubrics/ scoring guides clearly define what is expected of me as a teacher.					
The teacher evaluation rubrics/ scoring guides clearly describe what I need to know and do to earn each rating score.					
The teacher evaluation rubrics/ scoring guides are appropriate for my position.					
The teacher evaluation rubrics/ scoring guides provide a clear path for improving my practice.					
The teacher evaluation system is fair to teachers in all classrooms, content areas, and grade levels.					
The results from the teacher evaluation system are used to recognize or reward effective teachers.					
I have improved my practice as a result of the teacher evaluation system.					

Student growth in teacher evaluation

2. Please rate your level of agreement with the following statements about your district's plans for incorporating student growth in teacher evaluation.

	Strongly Neither disagree			Strongly	
	disagree	Disagree	nor agree	Agree	agree
I believe that the student growth measures that I will be evaluated on reflect my contribution to student learning.					
My impact on student growth is a significant part of my evaluation.					
My district has defined what it means for student growth to be a significant contributing component in our teacher evaluation system.					

3. Which of the following stude ☐ Multiple measures ☐ Formative data ☐ Summative data ☐ Multiple years of compa ☐ State assessments (for good and a district and a district and a district and a district growth across t	rable student rades/contents school-detern	data s with state ass nined common	essment data)	uation? (chec	ck all that apply)
Evaluator feedback					
4. Did you receive feedback fro ☐ Yes ☐ No	·		·		. 16
5. Please rate your level of agree your evaluator.	eement with t	he following st	atements about th	e feedback yo	ou received from
	Strongly disagree	Disagree	Neither disagree nor agree	Agree	Strongly agree
The feedback I received from my evaluator promotes a professional collaborative school culture.					
The feedback I received from my evaluator was given in the spirit of continuous improvement.					
The feedback I received from my evaluator helped me to become a more effective teacher.					
My evaluator's feedback included specific strategies that I could use to improve my practice.					
I have used my evaluator's feedback to improve my practice.					
The professional development and training I received throughout the school year was tailored to my specific needs as identified in my evaluation.					
6. In general, my evaluator pro ☐ 1 working day ☐ 2 working days ☐ 3 to 4 working days ☐ More than 4 working days

Appendix C. Principal survey on district implementation of educator evaluation systems

Principal evaluation system

1. Please rate your level of agreement with the following statements about your district's principal evaluation system.

	Strongly disagree	Disagree	Neither disagree nor agree	Agree	Strongly agree
The principal evaluation rubrics/ scoring guides clearly define what is expected of me as a principal.					
The principal evaluation rubrics/ scoring guides clearly describe what I need to know and do to earn each rating score.					
The principal evaluation rubrics/ scoring guides are appropriate for my position.					
The principal evaluation rubrics/ scoring guides provide a clear path for improving my practice.					
I am evaluated on whether I provide feedback to teachers each year.					
I have improved my practice as a result of the principal evaluation system.					

Student growth in principal evaluation

2. Please rate your level of agreement with the following statements about your district's plans for incorporating student growth in principal evaluation.

	Strongly disagree	Disagree	Neither disagree nor agree	Agree	Strongly agree
I believe that the student growth measures used in my evaluation reflect my contribution to student learning.					
My impact on student growth is a significant part of my evaluation.					
My district has defined what it means for student growth to be a significant contributing component in our principal evaluation system.					
Our district approves student assessments that will be used in the principal evaluation system to measure student growth.					

3. Student growth in my district that apply): ☐ Multiple measures ☐ Formative data ☐ Summative data ☐ Multiple years of compa ☐ State assessments (for gr ☐ Additional district and ☐ Student growth across to	rable student ades/content school-deteri	data s with state asse mined common	essment data)	ising the follo	owing (check all

Appendix F. Missouri's rating guide

Regional Educational Laboratory Central worked with Missouri education leaders to develop a rating guide to document criteria for determining adherence to the essential principles of effective evaluation systems (Missouri Department of Elementary and Secondary Education, n.d.). For each of the principles, the rating guide identifies criteria related to the policy documents and the practice survey data and provides a scoring process to determine whether the criteria have been met.

Indicators			Criteria	Criteria met?

Appendix G. Sample district summary report

Missouri developed a sample summary report format to summarize the ratings for each district and identify action steps for criteria that were not met. The summary report has two parts: an overall rating by principle and rating by policy and practice, with action steps.

Overall rating by principle

Rating	Principle 1	Principle 2	Principle 3	Principle 4	Principle 5	Principle 6	Principle 7
Fully met							
Partially met							
Not met							

Rating by policy and practice with action steps

			Poli	icy	Practice			
	Fully	Partially	Not		Fully	Partially	Not	
Principle	met	met	met	Action steps	met	met	met	Action steps
1				None.				None.
2				None.				Survey results indicated that the teachers and district administrators did not agree that the evaluation rubrics clearly describe what teachers need to know and do to earn each rating score. The district should walk through the rubric with teachers, principals, and district administrators and explain the district expectations related to each level of the rubric.
3				Provide documents that describe the mentoring program for principals.				Survey results indicated that teachers receiving mentoring were not offered a collaborative look at student data or modeling of effective teaching practices during their mentoring experiences. The district should work with mentors to ensure that these experiences are provided.
4				Provide policy documents that describe how student growth is incorporated into the evaluation system.				In the survey, teachers indicated that formative and summative data are not included in the student growth component of the teacher evaluation system. Once student growth policies are in place, the district should provide professional development to teachers regarding the student growth component of the teacher evaluation system.
5				Provide documents that state that feedback is provided for each teacher each year.				None.
6				Provide documents that indicate that evaluators are regularly using the Missouri Observation Simulation Tool system for training.				In the survey, district administrators indicated that principal training on the evaluation system did not include analyzing artifacts. Clarify the content of the trainings with district administrators.
7				Provide documents that indicate how the results of the educator evaluation are used to recognize or reward staff.				In the survey, teachers did not agree that the results from the teacher evaluation system were used to recognize or reward teachers. District administrators did not agree that the results from the principal evaluation system were used to recognize or reward principals. Develop, implement, and communicate policies to recognize or reward educators based on evaluation results.
