

# THE READY COMMUNITY

## An Important Component of Preparing a School-Ready Child

### What is school readiness?

School readiness involves more than just children. In the broadest sense, school readiness is about children, families, early environments, schools, and communities. Children are not innately “ready” or “not ready” for school. Their skills and development are strongly influenced by their families and through their interactions with other people and environments before coming to school.<sup>1</sup>

A community that is ready to support its children **ensures access to health care, provides quality childcare and early education, and invests in resources for families.**<sup>3</sup>

School readiness occurs when children have the skills, knowledge, and attitudes necessary for success in primary school, later learning, and life. Physical, cognitive, social, and emotional development are essential ingredients of school readiness. School readiness refers not only to ready children, but to ready communities, families, and schools.<sup>2</sup>

### Ensures Access to Health Care

A ready community helps ensure that children have access to health care, immunizations, and nutrition. Meeting these basic needs enhances engagement in learning and fosters better attendance at school.

### Invests in Resources for Families

A ready community invests in resources and activities that support families and promote school readiness. It is critical that communities support schools so they are ready to meet the needs of children. It is important for communities to support families so that children enter school with a firm foundation for learning.

### Provides Access to Quality Childcare and Early Education

A ready community helps ensure that families have access to quality childcare and early education. A quality early education program supports a child's development physically, socially, emotionally, in language and literacy, and in thinking skills.
