Study Information:

Title(s): Examining the implementation and impact of full-day kindergarten in Oregon

URL: <https://ies.ed.gov/ncee/edlabs/projects/project.asp?projectID=4634>

Abstract: Many states and districts offer full-day kindergarten (FDK) with the belief that additional learning time will lead to improved student outcomes in kindergarten and beyond. The evidence base on FDK is generally positive for short-term effects and unclear for longer-term effects, with some prior research associating FDK with gains in student outcomes such as grade 3 math and reading standardized assessment scores. In 2015/16, Oregon shifted its policy on kindergarten enrollment, creating financial incentives for districts to offer FDK. By 2017/18 nearly all Oregon kindergarten students were enrolled in FDK. State policymakers, district leaders, and other stakeholders need additional information on FDK to support decision-making and to understand FDK practices in Oregon.

Regional Educational Laboratory Northwest conducted this study in partnership with the Oregon Department of Education and one large Oregon school district. The study examined FDK implementation in the two years before the policy shift in 2015/16, including which districts were implementing FDK and how the programs were structured. The study also estimates the impact of attending FDK compared to half-day kindergarten (HDK) on student outcomes in kindergarten through grade 3 in one school district in Oregon before the 2015/16 policy shift. Lastly, the study explores activities and practices used in FDK programs in 2017/18, after the policy shift.

Description of the Sample:

Grade level(s): K-3

Any specific subgroups: Latinx; American Indian and Alaska Native, Black, multiracial, and Native Hawaiian and other Pacific Islander; English learner students classified in kindergarten; economically disadvantaged students; student age; the percentage of economically disadvantaged students at the school

Sample size: 5,134 students

Data Information:

Data source #1: Final analysis file

Analysis Information:

The final analytic file for the impact analysis is comprised of student-level administrative data for grades K-3 for the years 2013/14-2017-18 from the Oregon Department of Education and student-level full- and half-day kindergarten enrollment in one large district in Oregon for the years 2013/14-2014/15. Administrative data include multiple datasets that were merged across a set of identifiers. Full-day kindergarten students were matched with half-day kindergarten students using baseline data from the Kindergarten Entry Assessment and demographic characteristics. Half-day kindergarten students whose baseline characteristics did not match full-day kindergarten students were pruned from the sample. Baseline equivalence was established using effect size statistics (Hedge's g for continuous baseline characteristics and Cox's index for binary baseline characteristics) separately for each outcome's matched analytic sample. Multi-variate regression models, with baseline characteristics included as controls, were used for analyzing outcomes. Group analyses were analyzed by adding an interaction to the base model and conducting a regression analysis separately for each group, where the base group for comparison was students in half-day kindergarten who were a member of the group under analysis. The data were cleaned and merged using syntax provided in the file "6.5.N03.x Syntax Documentation." Details of the analysis can be found in the methodology appendix of the report (appendix B).
