Webinar: Rural Data Use: AQCP-CLASP Framework

September 20, 2017

[Slide: *CLASP-AQCP Pathway Framework*]

VALERIE LUNDY-WAGNER

So the next slide is really about CLASP and AQCP Pathways frameworks. So, CLASP is an organization out of Washington DC that does a fair bit of work—both nationally and in California—around career pathways.

One thing that, you know, we want you to understand—as you think about your regional data landscape is—sort of, how does this all fit together? And so, while I won't spend a ton of time on CLASP and the six elements as you can see—sort of, in this colorful diagram—what I do want to turn your attention to is the metrics that are associated with the CLASP framework—because I think this can be helpful for you as you think about what a regional Career Pathways or CTE Pathways system looks like.

And so, for the folks at CLASP and AQCP, they've really broken down their data and metrics into three categories. So, there are: interim outcomes, pathway outcomes and labor market outcomes.

[Slide: *Snapshot of CLASP-AQCP Pathway Metrics*]

And so what I have on this next slide...and I'm including the references on the bottoms of the...this slide and the previous slide, just in case you want to take a look at them—and it looks like there...it's also...the link has been shared in the chat box.

And so, look at, what are interim outcomes? So, some interim...some examples that we're pulling from their documents are, "Interim outcomes might be a high school diploma, completing a Pathways Course that's at the college level while they're in high school or in college, completing college-level math or English, and really thinking about credit accumulation." Those are some interim outcomes they see in this, sort of, Pathways system.

When you look at sort of, the middle, the Pathway outcomes—or I think they call them education and training outcomes on the full document—this might be: licenses or industry certifications, this might be an associate's degree, or here, even an associate's degree for a transfer—if that's relevant. And then, there are labor market outcomes, right?

So this is...this could be employment in targeted industry sectors—so, sectors that align with your CCPT or other high-quality Pathways. It might be about employment retention in some of those Pathways. Initial and then subsequent earnings in those Pathways.

And so, these are, things that, again...I bring these up not because it's something that you may...you would necessarily need to share with all of your partners—but for those of you that are regional leaders—I think it's a good way to sort of wrap your mind around the different types of data or metrics that you would be collecting to support and better understand these bigger, regional systems.
