The mission of the What Works Clearinghouse™ (WWC) is to be a central and trusted source of scientific evidence for what works in education. We review the research, determine which studies meet rigorous standards, summarize the findings, and disseminate them to the education community. The WWC team includes 300 people from 6 organizations, including the Institute of Education Sciences (IES), research organizations, and universities.

At the WWC, translating scientific evidence into accurate, accessible, and useful information for educators requires collaboration across staff in multiple roles, including IES leadership, methodologists, study reviewers, peer reviewers of WWC products, Practice Guide panelists and many more.

**CONTENT EXPERTS**
Content area experts nominate evidence-based interventions to consider for review and inclusion in Intervention Reports and advise on topic area protocols. They also contribute to Practice Guides by recommending evidence-based practices and how to put practices in place in the classroom.

**METHODOLOGISTS**
WWC methodologists develop formal review protocols for Intervention Reports. They also identify relevant literature and screen studies for inclusion. Methodologists ensure that the WWC uses the best possible standards and evidence, so the WWC provides educators with the best possible information.

**REVIEWERS**
WWC-certified reviewers assess the methodological quality and design rigor of evaluations of educational programs and practices to determine a WWC rating.

**IES LEADERSHIP**
IES staff sets the direction, standards, and expectations for WWC products. IES also ensures that resources are designed for a range of users and that these resources are disseminated effectively and efficiently.
